

OPTIMIZE ADJUDICATION WITH iMEDNET

Enhance visibility and streamline adjudication with iMednet

- Quickly access accurate and real-time information
- Automatically notify key stakeholders of events requiring review
- Easily discern open versus completed events
- Quickly review metrics by study, site and event
- Push inquiries for more information to sites in real-time
- Simplify parallel adjudication processes

In today's rapidly evolving clinical research industry, sponsors and CROs must juggle a variety of competing pressures and demands. The Clinical Events Committee (CEC) adjudication process is a critical component, and increasing regulatory pressure for independent adjudication, coupled with greater complexity in study designs and varied endpoints, makes managing the process challenging. iMednet Adjudication can help.

Streamline adjudication processes with iMednet

Adjudication processes can be complex and lack visibility, particularly when managed with disparate systems or on paper. iMednet Adjudication is different. As a seamless component of a comprehensive platform, the module provides complete visibility and is highly flexible, enabling you to adapt any adjudication workflow. The CEC can easily access and record critical safety data, while managing the process online with a quick glance reporting tool and dashboards that allow complete visibility to individual adverse events (AEs), adjudication results, and summary metrics. With iMednet, your adjudication manager can easily see AEs still requiring adjudication along with those that are complete.

Improve Efficiency and Maximize Safety with Real-Time Adjudication

With new and varying sources of data, multiple sites and increasingly complex study protocols, enabling the CEC to adjudicate events in real-time can optimize the study progress. With iMednet's comprehensive eClinical platform, the adjudication committee has complete, real-time data at their fingertips. The committee has immediate visibility to events of interest, and in real-time, they can quickly and easily push requests to sites for additional information. And other key stakeholders, like the executive committee or data safety monitoring board, have the information they need to effectively execute their responsibilities and run the trial effectively.

Remove Bias with Parallel Adjudication and Visibility

In an effort to remove bias from the adjudication process, more and more clinical studies rely on a parallel adjudication workflow. iMednet Adjudication enables teams to effectively and efficiently conduct parallel adjudication. The module supports the assignment of events, while also automatically notifying the CEC chairperson when a tie-breaking review is needed. Each committee member has access to the adjudication dashboard that provides complete event visibility, while management has access to a more comprehensive dashboard to track overall process.

“The increasing regulatory pressure for independent adjudication, coupled with greater complexity in study designs and varied endpoints, makes managing the adjudication process challenging. iMednet Adjudication fits every type of our required event adjudications, helping us streamline the process in studies requiring adjudication, while also providing broad visibility.”
-Alexandra Popma, COO, Baim Institute for Clinical Research

A complete solution

Why iMednet?

iMednet is a comprehensive, cloud-based, clinical data management system, centered around a robust EDC and built from the ground up with key native modules. Designed to also allow easy integrations, the platform enables research teams to meet the rapidly evolving requirements of clinical research, while supporting a wide range of study types and designs. iMednet is highly flexible and intuitive, enabling users to get studies up and running quickly, while ensuring easy onboarding of the entire research team and clinical trials sites.

MEDnet

About Mednet

Mednet is a healthcare technology company specializing in eClinical solutions designed for the global life sciences community. Mednet's comprehensive eClinical platform improves the efficiency of clinical studies of all types and sizes. Beyond electronic data capture (EDC), Mednet's solution set provides the tools required to build and manage all types of clinical research, while enabling organizations to adapt to evolving demands and requirements. Pharmaceutical, medical device, biotechnology and Contract Research Organizations (CROs) around the world have trusted Mednet for nearly 20 years to deliver the technology innovation, experience and reliability they need for success.
